MobileAnchor™

Delivers the most secure level of multi-factor authentication access to your applications and services.

MobileAnchor™ is stored directly on the device, providing support and stability for mobile digital credentials.

Unique benefits of WidePoint's MobileAnchor™ Derived Digital Credential:

1 | User Convenience

- **Seamless Access:** Users can directly access applications and services without needing to navigate through an additional Mobile Device Management (MDM) interface or container, streamlining the user experience.

- **Integrated MFA:** WidePoint's MobileAnchor™ can be combined with device biometrics (fingerprint, face recognition) for seamless multi-factor authentication (MFA).

2 | Enhanced Security

- **Direct Integration:** WidePoint's MobileAnchor™ generates a digital credential directly on the device, can leverage device-specific security features, such as hardware-based secure elements (e.g., TPM or SE) and biometric authentication, ensuring high levels of security.

- **Reduced Attack Surface:** WidePoint's MobileAnchor™ direct integration can minimize potential vulnerabilities associated with additional layers or intermediaries.

3 | Simplified Deployment

- **Less Overhead:** Deploying and managing WidePoint's MobileAnchor™ credentials directly on the device can be more straightforward compared to managing credentials within an MDM container, reducing administrative overhead.

4 | Flexibility and Compatibility

- **Native Support:** WidePoint's MobileAnchor™ can be supported natively by many modern operating systems and applications, ensuring better integration and compatibility.

The "good enough" solutions provided by other vendors often fall short of consistent security.

MobileAnchor™ significantly enhances mobile device security to the highest level and allows digital signing of emails and authenticating to federally controlled facilities, information systems, and applications from a mobile smart device.
